airport development reference manual new edition: Airport Economics Peter Forsyth, Cathal Guiomard, Hans-Martin Niemeier, 2023-07-27 This book provides a comprehensive guide to

the economics of airports for all managers, regulators and educators within the aviation industry. Written by three renowned experts but made accessible and relevant for all those working within the industry, or aspiring to do so, it is the perfect entry point for learning about the underlying economics of airports as a crucial component of the air transport system. It explains the cost structures of airports and then relates these to how airports determine their charges. It explains how charges at different airports vary, whether this is due to different types of traffic, different input prices, ways of producing outputs or different levels of efficiency. Most airports are publicly owned or regulated, and there has been a trend towards privatisation. The book explains how airports have been regulated and assesses how well the regulatory structures have performed; it discusses the trend towards light-handed regulation and the reliance on competition where this exists. The book examines the problems of limited capacity at airports and how these are resolved through slots and charging systems, and the long-term solution of investment in airports—why it is controversial, and how it can be achieved effectively. It also considers the environmental impacts of airports and the issues these pose for managers, from the well-known problems of airport noise to the growing recognition of the impacts of air transport on climate change, and the roles airports play in mitigating these consequences. Written for airport and airline managers, regulators and students, this book will suit Bachelor's and Master's programmes on air transport management.

airport development reference manual new edition: Aviation Investment Doramas Jorge-Calderón, 2020-12-28 Aviation Investment uniquely addresses investment appraisal methods across the key industries that make up the aviation sector, including the airports, air traffic management, airline and aircraft manufacturing – or aeronautic – industries. This practice-oriented book presents methods through realistic case studies. It covers both economic appraisal, or cost-benefit analysis, measuring the value of projects to society, and financial appraisal, valuing projects as cash generators. This substantially expanded second edition covers in greater detail the treatment of environmental emissions, paying particular attention to climate change. It addresses the treatment of Market-Based Mechanisms (MBMs), including cap and trade systems like ETS and offset systems like CORSIA, and compares them to environmental taxes. It also addresses the adjustments needed to measure the foreign exchange generating value of projects, relevant in the presence of trade barriers. The new edition includes two new project types. One is airport relocations, perhaps the most complex type of airport projects, where the economic case is often more nuanced than may be apparent. The second is the re-introduction of supersonic travel. Aviation Investment offers all aviation sub-sectors a single-source reference, bringing together the theoretical background of the economic appraisal literature and aviation investment in practice. It is written in a style that is accessible to non-academic professionals, using formulae only where strictly necessary to enable practical applications, and benefits from the substantial practical experience of the author.

airport development reference manual new edition: *Transport Terminals and Modal Interchanges* Christopher Blow, 2012-05-23 This is the first book to review a trend in transport systems which has only recently come of age: the multi-modal interchange. Separate modes of transport are being linked through 'joined-up thinking', and transport designers and authorities are only now able to exploit interchange opportunities. This book presents examples of how these new opportunities have been planned and designed, and outlines how transfer and mobility can be improved in the future. Blow takes the airport as the focal point of true multi-modal passenger terminals and presents the development of these buildings as representing a new experience in travel. The book shows that the success of the experience of transferring from one mode of transport to another depends on the many factors, including congestion in an already overloaded system, and the way that designers and managers have addressed contingency planning. International examples are drawn from areas where mobility is most concentrated and the demands on design are at their highest. The book also addresses important issues of rebuilding and redevelopment, where once separate modes of transport are being linked to each other, and where short-term inconveniences rectify past wrongs in the long term. It is a compendium of architectural and engineering achievement.
