forest products journal: Special Forest Products in Context , 2003 This report provides an introduction to the people who gather special forest products (SFPs) in the eastern United States, the role these resources play in their lives, and implications for management on national forest lands, particularly in relation to the Pilot Program on Forest Botanicals (P.L. 106-113, Â 339(a)). SFPs encompass a wide variety of products and provide important livelihood support through both market and nonmarket economic values. In addition, many gatherers value social dimensions of SFPs outside the economic realm. Gatherers are a diverse group (men and women, varied ethnic and cultural backgrounds), who often draw on substantial knowledge to harvest SFPs. Many are concerned about conservation and the sustainability of harvesting practices. Contextual factors affecting SFP activities include land management regimes and social conditions, such as household economies and life stage, at scales that range from macro-level markets (national, international) to micro-level household and individual use.

forest products journal: Innovation in the Forest Products Industry Abra Hovgaard, Eric Hansen, Joseph Roos, 2005 Because there is a lack of innovation research in the forest products industry and innovative activities in the industry are not well documented, this study attempted to fill that void. The objectives of this study were to understand the process and definition of innovation in the forest products industry, identify the constraints on innovative activities, identify resources that would improve innovation in forest products companies, compare the innovation environments in Alaska and Oregon, and provide a benchmark study for innovation in the forest products industry.??This study revealed that there are several aspects of innovation in the forest products industry. In addition, the innovation process is a combination of semiformal development stages, trial and error, intuition, and luck. A variety of factors constrained companies from being more innovative, including government regulations, shipping and labor costs, lack of cash flow, raw material characteristics, marketing expertise, and raw material supply. There do not appear to be any resources that would be helpful to forest products companies, at least none that the interviewed companies could recommend. Offering companies the chance to exchange ideas and network is the most valuable resource available.??The innovation environments in Alaska and Oregon are somewhat similar yet different in the marketing tactics employed and the techniques used to obtain market information.??Furthermore, the type of innovation projects that each region focuses on differs, as does the actual process used to develop innovations. Future research should focus on completing a quantitative component to this study, developing short courses or 1-day seminars, identifying factors that contribute to innovation success and failure, investigating why the forest products industry is not innovative by nature, and exploring the external acquisition of innovation in the forest products industry.

economics problems. The methods represent the forefront of econometrics in this area, and the volume is the first of its kind. An introductory paper explains the econometrics of unit-root processes. Much of what follows in the other papers depends upon only a few of the ideas presented in the introduction. The volume includes tests of, e.g., the Law of One Price, land valuation models, demand and supply models, Granger-causality, and forecast models. The reader will learn a great deal about forest economies, particularly in Northern Europe, and about the practical use of modern time-series methods. The methods presented are applicable to other fields of economics. The volume is aimed at researchers in applied economics and as a supplement to (advanced) theoretical textbooks, mainly in Natural Resource Economics.

forest products journal: *Adhesives and Finishes for Wood* Moon G. Kim, 2023-08-14 Adhesives and Finishes for Wood Understand the science of joining wood with this comprehensive guide Long seen as an old-fashioned material with narrowing modern applications, wood has seen increased popularity as a material in building and manufacturing in recent years. This has been driven by the need for sustainable resources and environmentally friendly materials. As a result of increased emphasis on wood, however, there is a corresponding need to understand the wood adhesives, the crucial materials in wood-based manufacture and craftsmanship. *Adhesives and Finishes for Wood* meets this need with a comprehensive but accessible introduction to the chemistry and applications of wood adhesives. Its easy-to-follow presentation nonetheless presents wood adhesives and finishes in significant detail. Ideal for readers without considerable preexisting knowledge in chemistry, this book includes everything the reader needs to understand and apply wood adhesives in their work or industry. *Adhesives and Finishes for Wood* readers will also find: Coverage ranging from the fundamentals of wood adhesive polymer chemistry to the properties of specific wood structures and resins A presentation suitable for both academic students and wood manufacture professionals An author with decades of experience in both academia and industry *Adhesives and Finishes for Wood* is a useful reference for advanced students and professionals in industries or manufacturing disciplines that incorporate wood, as well as for chemists, materials scientists, vocational school instructors, and more.

forest products journal: *The Global Forest Sector* Eric Hansen, Rajat Panwar, Richard Vlosky, 2013-12-04 Changes in production, demand, supply, and trade patterns; the impact of green building and bioenergy on industry practices and policy infrastructure; and new economies with production advantages and large consumption bases all present challenges and opportunities in the forest sector. With contributions from leading experts in academia and professional organizations, *The Global Forest Sector: Changes, Practices, and Prospects* fills a gap in the literature that is preventing students, scholars, and policy makers from developing a timely, structured, big-picture view of forest sector business. In addition, the book reviews current thinking on a wide variety of business management issues in the forest sector. The book covers managing change in the global forest sector and the impact of globalization on forest users. It discusses markets and market forces, new products and product categories, and the influence of China and Russia. The book then examines the environmental paradigm, including environmental activism, sustainability, and the impact of green building and bioenergy. The book concludes with coverage of the role of information technology, corporate social responsibility, innovation, and next steps. Overall, this book helps readers both develop a bird's eye view of the changes surrounding the forest sector as well as have a magnified view of numerous managerial issues associated with these changes. The content paints a picture of the current and changing forest sector including the state of forests, the nature of markets, the newly emerged patterns of stakeholder impact, and evolution of key business practices. It provides the foundation needed to develop the conservation-based economy required for future

success in the global forest sector.

forest products journal: Potential for Expanding Small-diameter Timber Market Dorothy A. Paun, 2000 Because of a combination of circumstances, there is an overabundance of small-diameter timber available in the United States. There is low demand for this material because it has low value. One way to increase the value, and therefore the demand, for this material is to develop or expand markets where the material can be used. We looked at markets where little or no machining would be required before use because this would make it more feasible to use small-diameter material. One such market is that of wood posts in highway applications. In this study, we gathered information on the current use of posts, both wood and those made from other materials, used in highway applications. Information was gathered using a survey of Department of Transportation engineers from across the United States. We then analyzed the information to assess the possibility of increasing the use of small-diameter timber in the highway application market. We found many opportunities for ways this market could be expanded, but we also found challenges to increasing this market.

forest products journal: Forest and Biomass Harvest and Logistics Jingxin Wang, 2022-11-26 This book explains forest and woody biomass harvest, harvesting machines, systems, logistics, supply chain management, best management practices, harvest scheduling and carbon sequestration. It also covers applications of harvesting principles in forest and biomass management practices. The book provides an in-depth understanding of functions and applications of current and future harvesting technologies, the unique characteristics of harvesting machine with respect to cost, productivity, and environmental impacts. Special features include harvest machine illustrations and images of field operations, tabular presentations of field studies of forest operations and detailed modelling processes for forest and biomass harvest logistics and supply chain management. Specifically, the book is designed for students, researchers, educators, and practitioners in the field of forest and biomass harvest and logistics. The book's contents have been tested in teaching as the Harvesting Forest Product class for undergraduates and graduates in the Division of Forestry and Natural Resources at West Virginia University since 2000. The information contained in this book is a robust reference resource for students who would be future forest and biomass managers, timber contractors, entrepreneurs, researchers, and educators in the fields of forest and biomass operations, engineering, and resource management.
