miller dynasty 200 manual: **Dougong** Alexandra Harrer, 2025-07-31 This is the first English-language study devoted to dougong, the block-bracket cluster widely regarded as the epitome of traditional Chinese architecture. For almost two millennia, dougong have been central to the multipartite frame structure of wooden buildings, connecting columns with beams, supporting projecting eaves, and providing resistance to earthquake damage. They have enabled and required builders to ensure both the functionality and the moral dimension of their designs through the thoughtful use of appropriately graded timbers and corresponding methods of modular design that determine the size and quality of a building in keeping with the social standing of its owner. Richly illustrated with original high-quality photographs and drawings, this book explores the engaging story of dougong as technical artifacts that embody Chinese culture. Alexandra Harrer delves into the previously unresolved relationship between standard dougong and their regional and local variations in the rhetoric of Chinese construction, offering an alternative to sociopolitical caste as a means of interpreting these differences. She untangles the lengthy selection process and trial-and-error development of the block-bracket cluster before codification to reveal how design idiosyncrasies derived from an unlikely combination of legal codes and ethical imperatives. For example, dougong with arms projecting at a 45- or 60-degree angle from the wall plane—long dismissed as unorthodox—are shown to be a subtle design expression that yields to authority while it seeks to exploit archi-cultural standards. Harrer argues that the ethical dimensions of graphic shapes and the culturally charged space that dougong occupy are key to understanding this creative process.

miller dynasty 200 manual: A Philatelic Ramble Through Chemistry Edgar Heilbronner, Foil A. Miller, 2004-03 This is not a history of chemistry which uses stamps instead of the usual illustrations, but a collection of short essays and comments on such chemistry as can be found on

postage stamps and other philatelic items. In other words, the choice of topics is dictated by the philatelic material available, with the necessary consequence that important parts of chemical history will be missing for the simple reason that they have not found their way onto postage stamps. Thus, the reader may find detailed comments on lesser known chemists, such as Wilhelm August Lampadius who has been honoured with two stamps by the German Post Office, but hardly anything on such luminaries as Robert Bunsen, who have not been deemed worthy of a commemorative issue.

miller dynasty 200 manual: *Constructing Modern Asian Citizenship* Edward Vickers, Krishna Kumar, 2014-12-05 In many non-Western contexts, modernization has tended to be equated with Westernization, and hence with an abandonment of authentic indigenous identities and values. This is evident in the recent history of many Asian societies, where efforts to modernize – spurred on by the spectre of foreign domination – have often been accompanied by determined attempts to stamp national variants of modernity with the brand of local authenticity: ‘Asian values’, ‘Chinese characteristics’, a Japanese cultural ‘essence’ and so forth. Highlighting (or exaggerating) associations between the more unsettling consequences of modernization and alien influence has thus formed part of a strategy whereby elites in many Asian societies have sought to construct new forms of legitimacy for old patterns of dominance over the masses. The apparatus of modern systems of mass education, often inherited from colonial rulers, has been just one instrument in such campaigns of state legitimation. This book presents analyses of a range of contemporary projects of citizenship formation across Asia in order to identify those issues and concerns most central to Asian debates over the construction of modern identities. Its main focus is on schooling, but also examines other vehicles for citizenship-formation, such as museums and the internet; the role of religion (in particular Islam) in debates over citizenship and identity in certain Asian societies; and the relationship between state-centred identity discourses and the experience of increasingly ‘globalized’ elites. With chapters from an international team of contributors, this interdisciplinary volume will appeal to students and scholars of Asian culture and society, Asian education, comparative education and citizenship.
