Although some academic libraries are collaborating in specific ways in a small subset of institutions, there is much untapped potential for developing partnerships. As library and information science roles continue to evolve to be more data-centric and interdisciplinary, and as research using a variety of data types continues to proliferate, it is imperative to further explore the dynamics between libraries and the data science ecosystems in which they are a part. The Handbook of Research on Academic Libraries as Partners in Data Science Ecosystems provides a global perspective on current and future trends concerning the integration of data science in libraries. It provides both a foundational base of knowledge around data science and explores numerous ways academicians can reskill their staff, engage in the research enterprise, contribute to curriculum development, and help build a stronger ecosystem where libraries are part of data science. Covering topics such as data science initiatives, digital humanities, and student engagement, this book is an indispensable resource for librarians, information professionals, academic institutions, researchers, academic libraries, and academicians.

Cities Donald Leslie Johnson, 2016-10-14 Frank Lloyd Wright : The Early Years : Progressivism : Aesthetics : *Cities* examines Wright's belief that all aspects of human life must embrace and celebrate an aesthetic experience that would thereby lead to necessary social reforms. Inherent in the theory was a belief that reform of nineteenth-century gluttony should include a contemporary interpretation of its material presence, its bulk and space, its architectural landscape. This book analyzes Wright's innovative, profound theory of architecture that drew upon geometry and notions of pure design and the indigenous as put into practice. It outlines the design methodology that he applied to domestic and non-domestic buildings and presents reasons for the recognition of two Wright Styles and a Wright School. The book also studies how his design method was applied to city planning and implications of historical and theoretical contexts of the period that surely influenced all of Wright's community and city planning.
