queen of shops mary portas: The Television Entrepreneurs Raymond Boyle, Lisa W. Kelly, 2016-03-03 With business seemingly everywhere on television, from the risks of the retail and

restaurant trade to pitching for investment or competing to become the next 'apprentice', *The Television Entrepreneurs* draws upon popular business-oriented shows such as *The Apprentice* and *Dragons' Den* to explore the relationship between television and business. Based on extensive interviews with key industry and business figures and drawing on new empirical research into audience perceptions of business, this book examines our changing relationship with entrepreneurship and the role played by television in shaping our understanding of the world of business. The book identifies the key structural shifts in both the television industry and the wider economy that account for these changing representations, whilst examining the extent to which television's developing interest in business and entrepreneurial issues is simply a response to wider social and economic change in society. Does a more commercial and competitive television marketplace, for instance, mean that the medium itself, through a particular focus on drama, entertainment and performance, now plays a key role in re-defining how society frames its engagements with business, finance, entrepreneurship, risk and wealth creation? Mapping the narratives of entrepreneurship constructed by television and analysing the context that produces them, *The Television Entrepreneurs* investigates how the television audience engages with such programmes and the possible impact these may have on public understanding of the nature of business.

Like the vote for Brexit in the UK, there seemed to be a new de-synchronicity - a huge reality gap - between the unfolding of history and the mainstream news media's interpretations of and reporting of contemporary events. Through a series of short, sharp interventions from academics and journalists, this book interrogates the emergent media war around Donald Trump. A series of interconnected themes are used to set an agenda for exploration of Trump as the lynch-pin in the fall of the liberal mainstream and the rise of the right media mainstream in the USA. By exploring topics such as Trump's television celebrity, his presidential candidacy and data-driven election campaign, his use of social media, his press conferences and combative relationship with the mainstream media, and the question of 'fake news' and his administration's defence of 'alternative facts', the contributors rally together to map the parallels of the seemingly momentous and continuing shifts in the wider relationship between media and politics.

queen of shops mary portas: Clarks: Made to Last Mark Palmer, 2013-04-11 Clarks' reach extends to all corners of the globe and yet it remains a family-owned business firmly rooted in its Quaker origins, (unlike other well known Quaker firms like Cadburys, now part of US giant Kraft.) Founded in 1825 by two brothers, Cyrus and James Clark, the company began as a rug-making operation in the then tiny village of Street, Somerset. One day, James Clark began making slippers from off-cuts of rugs and found that people wanted to buy them. Slippers became shoes and boots - and a business was born. Over the years it has had its ups and downs but it has always strived to remain true to its Quaker values in its commitment to the well-being of its workforce and the local community. Schools, libraries and recreation halls were built - and trade unions banned. As the sun set on the British Empire, Clarks opened up new frontiers across the world. Clarks brand logo became one of the most famous in the world. Every parent in the 1950s swore by Clarks shoes for their children as well as buying them for themselves. But increased competition from within the UK and overseas saw concerns for the future heightened during the 1980s. A hostile bid for the company in the early 1990s saw the board and the family split. Eventually, shareholders voted to reject the bid. The company was reorganised with all its lines made outside the country. This resulted in the closure of all its UK factories and the laying off of hundreds of Clarks employees. But the outcome has been a transformation in the company's fortunes. In 2010 its profits were over £100 million and its retro desert boots and other styles have become the height of fashion, especially in China and America.

The global pandemic has made the crisis immeasurably worse but it wasn't the cause. The crisis was already raging in 2019 with thousands of store closures. Large retailers became complacent and failed to respond to changing consumer behaviour. Town centres are the victims of these changes rather than the cause of them. To understand the current crisis and how it might be addressed, this book takes a long view of retailing based on a hundred case studies. It looks at the way town centres responded to previous crises and explores current trends affecting town centres and how places are responding. The message is optimistic: adaptable town centres can once more become the diverse, characterful, independent places that existed before they were homogenised by big retail. Drawing on conceptual debates and empirical research from the United Kingdom and other international contexts, the contributors engage with issues around the politics and governance of territorial development, economic development, planning and regeneration and the environment. *Territorial Policy and Governance* addresses the question of how alternative forms of territorial governance and policy can help to shape patterns of urban and regional development, highlighting the related opportunities, constraints and challenges that confront their operationalisation. The sales and marketing challenge is what to say, and where to say it. Shoppernomics, based on research and case studies from US and UK, examines the path taken by the potential buyer. The authors describe the key drivers and barriers on the journey to purchase. They identify the need to get key messages, key partners and key media all working together, and a framework for success. The authors challenge the budget split between sales and marketing as possibly the largest barrier to successful shopper marketing and identify core stores and the areas they serve as being equally important targets for investment. Shoppernomics provides the manual for achieving successful companies serving happy and loyal customers, as the ultimate goal for manufacturers, retailers and brands. It reminds marketers that it is what customers take from their product or service that is important, not what they think they are delivering. It reminds sales people that nothing is more important than matching supply and demand in the eyes of the customer regardless of who actually makes the ultimate sale. Shoppernomics is designed to deliver fast results for companies prepared to recognise that they are not perfect, and go the extra mile to find out why.
