new york times math puzzle: *The Monty Hall Problem* Jason Rosenhouse, 2009-06-04
Mathematicians call it the Monty Hall Problem, and it is one of the most interesting mathematical brain teasers of recent times. Imagine that you face three doors, behind one of which is a prize. You choose one but do not open it. The host—call him Monty Hall—opens a different door, always choosing one he knows to be empty. Left with two doors, will you do better by sticking with your first choice, or by switching to the other remaining door? In this light-hearted yet ultimately serious

book, Jason Rosenhouse explores the history of this fascinating puzzle. Using a minimum of mathematics (and none at all for much of the book), he shows how the problem has fascinated philosophers, psychologists, and many others, and examines the many variations that have appeared over the years. As Rosenhouse demonstrates, the Monty Hall Problem illuminates fundamental mathematical issues and has abiding philosophical implications. Perhaps most important, he writes, the problem opens a window on our cognitive difficulties in reasoning about uncertainty.

new york times math puzzle: One Size Does Not Fit All Indrek S. Wichman, 2017-12-31 Academic success requires talent (ability), which is not equally distributed among students. Almost all American undergraduates hail from K-12 public schools, based on the theory that everyone is

academically educable. This has led to the one-size-fits-all system, which has underserved the less academically inclined students, a majority of the K-12 population. The theory that every student is academically educable, an unverified axiom of the current K-12 educational paradigm, has not been subjected to serious scrutiny. Consequently, little progress has been made toward curricular revision except tweaks of the existing system, currently the world's most expensive. However testing, classroom performance, teacher assessment, advances in human biology and, most importantly, family and community experience, suggest that it is possible to determine who is suited for an academic or a technical education. Once that hurdle is crossed, the question of how to best educate/train/prepare America's non-academic youth can be thoughtfully, practically and compassionately addressed.
