adolescence mcgraw hill santrock manual: Faith in Small Groups of Adolescents Harmen van Wijnen, 2016-10-01 The church is struggling with the gap between the church and adolescents. Over the last decades, the problem of 'bridging the gap' was often outsourced to youth ministry in different forms, such as special youth workers, faith-learning programs, local activities, national events, holidays, and education of youth leaders. However, the overall conclusion is that over the last ten years, traditional youth ministry forms cannot function as the bridge they should be; the gap is too deep and too wide, or perhaps the metaphor of the gap is no longer appropriate to describe the current situation regarding the church and adolescents. This book aims to provide a creative and innovative contribution to the search for new paradigms in youth ministry. This book shows that small groups are very important for adolescents. The natural social environment greatly influences adolescents in their process of transformation from childhood to adulthood, including faith socialization. The emphasis on the natural social environment can be defined as follows: "Being goes before organizing, and the individual cannot 'be' without others." Briefly, "being together as a basic given." The conclusion of this book is that youth ministry needs a twofold turn: a turn from the individual to the communal, and a turn from an organized environment to a natural environment.

adolescence mcgraw hill santrock manual: Nature, Nurture, and the Transition to Early

Adolescence Stephen A. Petrill, Robert Plomin, John C. DeFries, John K. Hewitt, 2003-03-27 Some of the most intriguing issues in the study of cognitive, social, emotional, and physical development arise in the debate over nature versus nurture; a debate difficult to resolve because it is difficult to separate the respective contributions of genes and environment to development. The most powerful approach to this separation is through longitudinal adoption studies. The Colorado Adoption Project (CAP) is the only longitudinal adoption study in existence examining development continuously from birth to adolescence, which makes it a unique, powerful, and tremendously valuable resource. CAP is an ongoing assessment of 245 adopted children and 245 biological control children assessed from birth to early adolescence. This book is the fourth in a series describing CAP results. This latest volume, edited by four eminent researchers in developmental psychology, builds on the large body of research already generated by investigating the role of genes and environments on early adolescent development. Because it is the only volume on the most comprehensive investigation of the effect of genes and environments on early adolescent development, this work will be invaluable to researchers in developmental, cognitive, and social psychology.
