Industrial Revolution Chapter Test Form Answers

industrial revolution chapter test form answers: Gender, Work and Wages in Industrial Revolution Britain Joyce Burnette, 2008-04-17 A major study of the role of women in the labour market of Industrial Revolution Britain. It is well known that men and women usually worked in different occupations, and that women earned lower wages than men. These differences are usually attributed to custom but Joyce Burnette here demonstrates instead that gender differences in occupations and wages were instead largely driven by market forces. Her findings reveal that rather than harming women competition actually helped them by eroding the power that male workers needed to restrict female employment and minimising the gender wage gap by sorting women into the least strength-intensive occupations. Where the strength requirements of an occupation made women less productive than men, occupational segregation maximised both economic efficiency and female incomes. She shows that women's wages were then market wages rather than customary and the gender wage gap resulted from actual differences in productivity.

industrial revolution chapter test form answers: *Urban Growth* Brian T. Robson, 2012-12-06 Do large cities grow more or less rapidly than small ones? Why should the relationship between city size and population growth vary so much from one period to another? This book studies the process of population growth in a national set of cities, relating its findings to the theoretical concepts of urban geography. To test his ideas, the author studies the growth of cities in England and Wales between 1801 and 1911. His explanations draw strongly on the connection between growth and the adoption of innovations. He develops a model of innovation diffusions in a set of cities and, in support of this model, looks at the way in which three particular innovations - the telephone, building societies and gaslighting - spread amongst English towns in the nineteenth century. This book was first published in 1973.
