Authors and publishers invest significant time and resources to produce accurate and pedagogically sound texts. Earlier editions were called "the best current textbook of psychiatry" by the New England Journal of Medicine, and "the gold standard" by the American Journal of Psychiatry. *Tasman's Psychiatry*, 5th Edition, builds on the initial vision in prior editions of approaching psychiatric evaluation and care from an integrative bio-psycho-social-cultural perspective. It is designed to be an essential and accessible reference for readers at any level of experience. This editorial approach encompasses the importance of the first encounter between patient and clinician, followed by the complex task of beginning to develop a therapeutic relationship and to develop and implement a treatment plan in collaboration with the patient. The importance of increasing attention to the role of culture and social determinants of mental health is reflected both in specific chapters and in components of many chapters throughout the book, especially in those pertaining to clinical evaluation, the therapeutic alliance, and treatment. The global scope of this edition is reflected throughout the book, including the section on psychiatric disorders where evaluation using both ICD 11 and DSM 5-TR is discussed. Most chapters are authored by experts from at least two different countries or continents, adding a critically important dimension which often is missing in major psychiatric textbooks. *Tasman's Psychiatry*, 5th Edition, is an essential reference for all medical professionals and students who need a trusted reference or learning tool for psychiatry, psychology, clinical research, social work, counseling, therapy, and all others.

Levesque, 2011-09-05 The Encyclopedia of Adolescence breaks new ground as an important central resource for the study of adolescence. Comprehensive in breath and textbook in depth, the Encyclopedia of Adolescence - with entries presented in easy-to-access A to Z format - serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer's print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to Self, Identity and Development in Adolescence. This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on Adolescents' Social and Personal Relationships. This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines Adolescents in Social Institutions. This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. Adolescent Mental Health constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development.
