good jobs for math majors: *Major Decisions* Laurie Grobman, E. Michele Ramsey, 2020-03-13 A practical how-to guide for students and a powerful reminder of the value of a humanities education. In recent decades, the humanities have struggled to justify themselves in the American university. The costs of attending a four-year college have exploded, resulting in intense pressure on students to major in STEM (science, technology, engineering, and mathematics), business, and other pre-professional or practical majors that supposedly transmit more marketable skills than can be acquired from the humanities. But, as Laurie Grobman and E. Michele Ramsey argue, this vision of humanities majors idly pondering the meaning of life for four years is inaccurate. *Major Decisions*

demonstrates how choosing a major in the humanities is a worthwhile investment in a global economy that is shifting in the direction of college graduates who think broadly, critically, and ethically. Indeed, the core skills and knowledge imparted by an education in the humanities—including facility with written and verbal communication, collaboration, problem-solving, technological literacy, ethics, leadership, and an understanding of the human impacts of globalization—are immensely useful to employers across a variety of sectors. *Major Decisions* serves as a deeply informative guide to students and parents—and provides a powerful reminder to employers and university administrators of the true value of an education in the humanities.

Young, 2012-12-06 The Conference/Workshop of which these are the proceedings was held from 28 June to 1 July, 1982 at Williams College, Williamstown, MA. The meeting was funded in its entirety by the Alfred P. Sloan Foundation. The conference program and the list of participants follow this introduction. The purpose of the conference was to discuss the re-structuring of the first two years of college mathematics to provide some balance between the traditional calculus linear algebra sequence and discrete mathematics. The remainder of this volume contains arguments both for and against such a change and some ideas as to what a new curriculum might look like. A too brief summary of the deliberations at Williams is that, while there were - and are - inevitable differences of opinion on details and nuance, at least the attendees at this conference had no doubt that change in the lower division mathematics curriculum is desirable and is coming.
